SECO-LARM ACTIVE VIDEO BALUNS WITH DATA AND SURGE PROTECTION NOW AVAILABLE

IRVINE, CALIF., December 2, 2005 - SECO-LARM U.S.A, Inc. is now shipping a new series of active video baluns which make it easier than ever to install CCTVs in remote locations.

The new EVT-TB1-42T transmitter and EVT-RB1-4T2 receiver are the quick, low-cost, long-distance way to connect a CCTV camera to a monitor, multiplexer, or video recorder at up to 8,000 feet. The active (amplified) video baluns transmit video signals of a CCTV camera long distances over low-cost CAT 5e UTP (unshielded twisted pair) cable. Suitable for full-motion color and monochrome cameras, video signal and gain are adjustable for maximum picture quality. In addition, a built-in RS422/RS485 data port allows the transmission of PTZ (pan, tilt, and zoom) signals.

These active video baluns can be used to quickly install any style of CCTV camera throughout an entire building or an entire campus without expensive coax cable. A unique interlock feature also allows multiple baluns to be stacked side-to-side and share a common power source.

Each balun includes surge protection as well as a gold-plated BNC connector and a removable terminal block. They also feature high immunity from interference, with a built-in impedance-coupled device and noise filter. They support a wide range of video formats, including RS170, NTSC, PAL, SECAM, and CCIR. Each transmitter and receiver also includes a separate 12VDC power adapter.

The Active Video Baluns are just a few of SECO-LARM's wide selection of UTP transmission accessories for the CCTV, RF, security, and electronics industries. For more information about the video baluns or any of SECO-LARM's full line of CCTV, RF, residential, and commercial security systems and accessories, or to request the latest catalog, please contact the SECO-LARM Sales Department (949) 261-2999 (California), fax (949) 261-7326 or (800) 662-0800, or visit the company on the Web at seco-larm.com.
