SECO-LARM Introduces the New ENFORCER Quad Photobeam Detectors

IRVINE, CALIF., October 28, 2008 - SECO-LARM is now shipping the ENFORCER E-964-Q Series of Multi-Frequency Quad Photobeam Detectors. Four beams and four selectable channel frequencies provide enhanced perimeter protection by reducing crosstalk between multiple units and reducing false alarms. In addition, the detectors' environmental output sends a signal when weather conditions worsen, to prevent false alarms.

The E-964-Q Series features a range of up to 1/4 mile (400m) indoors, and installation is quick and easy thanks to a built-in laser-alignment system. The detectors feature lensed optics to reinforce beam strength and provide excellent immunity to false alarms due to rain, snow mist and so on.

SECO-LARM features a complete line of ENFORCER Quad Photobeam Detectors:

The E-964-Q165Q has a range up to 165' (50m) outdoors, the E-964-Q330Q has a range up to 330' (100m) outdoors, the E-964-Q495Q has a range up to 495' (150m) outdoors, and the E-964-Q660Q has a range up to 660' (200m) outdoors.

(High-Resolution Photos Available)
