SECO-LARM Introduces a New Line of Easily Programmable RF Receivers

IRVINE, CALIF., March 8, 2011. SECO-LARM now has available for immediate shipment a new line of easily programmable RF receivers.

The SK-910RBQ is a 1-channel receiver. The SK-910RB2Q is a 2-channel receiver. Both receivers have 5 programmable relay output modes: 4- second timed output, validity output, toggle output, 1-second timed output, and latch output. Output modes are easily programmed via buttons on the PC board -- there is no need to cut loops. For the SK-910RB2Q, each channel can be programmed to a different relay output mode.

When used with an RF transmitter, these receivers can be used to control garage doors, gates, house lights, alarm panels, and other devices. All SECO-LARM transmitters (both fixed code and CODEBUMP™) will work with the SK-910RBQ and SK-910RB2Q.

Each receiver operates up to 500ft (152m), has an operating voltage of 11~24 VAC/VDC, and has 2 LEDs to indicate programming status.
