SECO-LARM Introduces New "No-Touch" RTE Plate in White

IRVINE, CALIF., July 29, 2009 - The ENFORCER® "No-Touch" Request-to-Exit Sensor is now available in a white décor-style single-gang wall plate (SD-927PWCQ). This sensor uses reliable IR technology to request egress from a protected area, or activate a device with the simple wave of a hand. Since no touch is required, the risk of cross-contamination is reduced, making the sensor ideal for use places like hospitals, cleanrooms, schools, and offices.

The SD-927PWCQ includes English and Spanish instruction decals "No Touch" and "Sin Contacto", or the sensor can be left blank for a more attractive installation. Other features include a 2" (5cm) sensing range, a 3A relay, and an illuminated sensor area that changes color from red to green when activated, for easy identification.

Two other models of ENFORCER "No-Touch" sensor are available in stainless-steel, single-gang size, the SD-927PKC-NEQ with printed English instructions, and the SD-927PKC-NSQ with printed Spanish instructions.
