SECO-LARM UNVEILS NEW DIGITAL KEYPAD WITH TWO RELAY OUTPUTS AND 110 USERS

IRVINE, CALIFORNIA, October 9, 2002 — SECO-LARM U.S.A, Inc. just released its SK-983A100, a low-cost digital keypad with two relay outputs.

The first relay output, rated at 5A, can be programmed for up to 100 unique user codes. The second relay output, rated at 1A, can be programmed for up to 10 individual users. This allows one keypad to control access to multiple doors, or to control access to one door and operate an alarm system. Both outputs can be programmed to turn on for up to 999 seconds. The codes for both relays can be quickly deleted or changed if an employee leaves the company.

Users can operate the SK-983A100 with the normal code, or in an emergency they can key in a duress code based on the normal code which operates the keypad while sending a panic signal to an alarm system. There is also a quick code for easy access to frequently-used areas, and an egress output for exiting a protected area without using the keypad.

Also included are wrong-code lockout, two N.C. tamper switches, an internal buzzer for audible status indications, three LEDs for a visual look at the keypad's status, and a backbox for easy mounting.

The SK-983A100 is currently shipping to authorized SECO-LARM distributors and dealers

In addition to the SK-983A100, SECO-LARM also offers the SK-983A, a digital keypad with one relay output and three user codes.

The SK-983A100 is just one example of SECO-LARM's wide selection of products and accessories for the security and electronics industries. For more information on the SK-983A100, or on SECO-LARM's complete lines of residential and commercial security systems and accessories, please contact the SECO-LARM Sales Department:
