SECO-LARM Introduces SL-1301 Series LED Strobe Lights

IRVINE, CALIF., February 4, 2010 - The SL-1301 Series SECO-LARM LED Strobe Lights are now available. These LED strobe lights have a long life of 50,000 hours (over 5.7 years of continuous use) -- more than 160 times the normal operating life of a strobe light with a Xenon Tube.

The SL-1301 LED Strobes are extremely versatile. Built with 6 programmable flashing patterns (all with adjustable flashing speed), you can easily select any of the following: Strobe, Rotating Clockwise, Rotating Back and Forth, Steady ON, Flashing with Progressive ON, and Flashing with Progressive ON/OFF. Because the SL-1301 is IP66 rated, it can be used for indoor or outdoor signaling.

In addition, the SL-1301 has 9-Volt backup battery capability for those instances when main power is interrupted.

The SL-1301 LED strobe lights are specially designed so they are clearly visible from all directions - most LED strobes are only visible from the side. SECO-LARM offers LED strobe lights with Red, Amber, Blue, and Clear lenses. They are compact in size (4" x 2-7/8") so they can be inconspicuously mounted in almost any location.
