SECO-LARM UNVEILS NEW WINDOW ROLL-UP MODULE WITH MULTIPLE POWER SETTINGS

IRVINE, CALIFORNIA, October 9, 2002 — SECO-LARM U.S.A, Inc. just released its SR-5220A, a window roll-up module which works with both normal and heavy-duty window motors.

The most unique feature about the SR-5220 is its programmable high/low window strength settings. These settings determine the amount of stopping force required for the module to shut off. The default “low” setting works well on most vehicles. However, on vehicles with larger frames and stronger window motors, more current may be required for operation. Therefore, a “high” setting is also provided.

The SR-5220A rolls two vehicle windows up or down, or it can be used to open and close a single window or a car’s sunroof. A microprocessor cuts off the roll-up operation if it takes too long or if a window is blocked.

It is compatible with nearly any power window system, and works off a momentary or constant ground trigger, making it ideal for use with almost any vehicle alarm or remote control receiver.

The SR-5220A is currently shipping to authorized SECO-LARM distributors and dealers

In addition to the SR-5220A, SECO-LARM also offers the SR-5440A, a module which rolls up from one to four windows, one at a time.

The SR-5220A is just one example of SECO-LARM's wide selection of alarms and accessories for the security and electronics industries. For more information on the SR-5220A, or on SECO-LARM's complete lines of vehicle security and keyless entry systems and accessories, please contact the SECO-LARM Sales Department:
